COMPANY OVERVIEW

Since 1991, Worksite Medical® has been working to keep firefighters safe, and their departments NFPA and OSHA compliant. By offering both on-site and clinic-based medical surveillance testing, we ensure that you're company can complete all of its testing, from firefighter physicals to respirator fit testing, at your convenience.

With two standalone clinics (Belcamp, MD & Ellwood City, PA), and a large fleet of state-of-the-art mobile medical units that travel throughout the eastern portion of the United States, our highly trained medical staff has helped protect hundreds of firefighters each year. In the process, we've also saved departments hundreds upon thousands of dollars in fines.

You Keep Your Community Safe,
So Let Us Do The Same For You.

What is NFPA 1582?

Approximately 50% of all firefighter fatalities occur as a result of medical emergencies. Many of these deaths can be avoided with early detection of underlying medical conditions. For that reason, the National Fire Protection Association (NFPA) created a required set of medical exams for firefighters.

NFPA 1582 is a standard that outlines an occupational medicine program created to reduce risks and provide for the health, safety & effectiveness of firefighters operating to protect civilian life and property.

The standard **REQUIRES** that firefighters have annual physical exams and laboratory services; as well as vision tests, pulmonary tests, chest x-rays (every five years), EKGs, audiograms, cancer screenings, and immunizations.

WHAT OTHERS SAID

“The testing is good because it’s a preventative measure...you can catch things early. Worksite Medical® is so easy to use because they come right to the facility. It’s the only company that can do all of the testing required. Instead of sending members to different places while trying to work around their schedules, we just have Worksite Medical® do it all right here in one day. Our members are valuable. If we lose someone, it’s detrimental to the entire department.”

Captain Dave Congini
Neshannock Fire Department

“I was very impressed with how quickly I received my results, and how professionally detailed they were. I was also very impressed with all of the staff; everyone was very nice, and I could tell that they take pride in their jobs. The equipment and facilities were also commendable. With that said, my experience exceeded my expectations, and I will be in contact with Worksite Medical® for all of our annual physicals next year.”

Chief Mark Stowe
Beaver Falls Fire Department

MEDICAL TESTING COMPONENTS

For every
line-of-duty death,
there are 17 non-fatal
cardiac events that
occur on duty.

NFPA 1582 CHECKLIST

- PHYSICAL EXAMINATION
- BLOOD ANALYSIS
- URINALYSIS
- PULMONARY FUNCTION TEST
- CHEST X-RAY - *DUE EVERY 5 YEARS*
- EKG
- INFECTIOUS DISEASE SCREENING
